

# Hydraulic power brake valve

# Model MB13-MS

## **RA 66205** Edition: 06.2013

- Component series 1X
- Service brake pressure 22, 30, 39, and 47 bar braking

## Features

- Compact design
- Integrated maximum pressure limitation of the brake circuits
- ▶ Brake pressure proportional to actuation force
- Low hysteresis
- ▶ Brake line pressure synchronization
- Line mounted
- Rugged construction
- Optional treadle-style foot pedal

Maximum inlet pressure	P, ACS	þ	PSI (bar)	4500 (310)
at port				
Maximum tank pressure	Т	þ	PSI (bar)	10 (0.7) Maximum continuous back pressure. No oscillation
at port				permitted.
Hydraulic fluid				Mineral oil (HL, HLP) according to DIN 51524, other hydraulic
				fluids, such as HEES (synthetic esters) according to VDMA
				24568 as well as hydraulic fluids as specified in the data sheet
				90221, on inquiry.
Hydraulic fluid temperature range		θ	°F (°C)	-13 to +176 (-20 to 80)
Viscosity range		11	SSU	40 to 1800 (2.8 to 380)
		ν	(mm²/s)	+0 10 1000 (2.0 10 000)
Maximum permitted degree of cont	amination of the			Class 17/14 or better
hydraulic fluid, cleanliness class ac	cording to ISO 4406 (c)			

## Note

For applications outside these parameters, please consult us!

## Function

The single circuit hydraulic power brake valve is a directly operated 3-way pressure reducing valve with smooth mechanical operation. The valve regulates pressure in brake line circuit proportional to force applied to actuator.

Single circuit power brake valve components include: housing (1) regulating spool (2), regulating spring (3), actuator (4), and the return spring (5).

The operator depresses the actuator (4). The regulating spring (3) strokes the regulating spool (2), closing off the T port and opening the brake circuit port B to accumulator pressure through supply pressure port P. Pressure from brake circuit port B is communicated to return spring chamber (5), where feedback force is developed, opposing the operator's input force. When the sum of feedback force and return spring (5) pre-load is equal to the operator input force transmitted through regulating spring (3), the regulating spool moves to a blocked center condition where the P, T, and B ports are closed simultaneously. When operator (4) input force is removed, the regulating elements move to the standby position, blocking the pressure port P and venting the service port B to tank.

Ports	
ACS	Accumulator charge switch port
Р	Supply pressure port
т	Tank port
BLS	Brake light switch port
В	Brake system work port
BPT	Brake pressure test port

If pressure falls in brake system line **B** or operator pushes harder on actuator (**4**), the supply pressure **P** is re-connected to brake system port **B** until force is balanced again. If brake system port **B** is too high, fluid is bled to tank through the **T** port until balance is again established. When force to actuator is removed, the regulating spool (**2**) moves to standby position, blocking the supply pressure port **P** and venting the brake system work port **B** to tank **T**.

#### Cross-section

# **General notes**

#### Installation notes

- Rubber parts must not be painted.
- Operating elements must not be directly exposed to high-pressure jet cleaning.
- The tank must be mounted above the brake valve MB13-MS to avoid drainage of the brake valve.
- When assembling below the base plate it must be taken care that the movement of the pedal cannot be affected by dirt.

#### Notes for the repair

 Damaged valves must be repaired, even if their function is not impaired.

### Installation position

• Variable mount possible.

## Intended use

The MB13-MS is exclusively intended to be assembled together with other components to form partly completed or complete machinery. The component may only be commissioned if it has been integrated in the machine for which it is designed. You may use the product as follows:

- ► The brake valves MB13-MS have been developed for the application in mobile working machinery.
- Comply with the technical data.
- The product is only intended for professional use and not for private use.
